***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "a spring on said gate to maintain the gate roller in contact with the cam" in claim 8 must be shown or the feature(s) canceled from the claim. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

The disclosure is objected to because of the following informalities: On page 8, line 4, "cam surface 99" should be --cam surface 98-- and on page 9, line 29, "tube 78" should be --tube 70--. Appropriate correction is required.

***Claim Objections***

Claim 3 is objected to because, line 3, "an other" should be one word --another--. Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. With respect to claims 1, 2, 5-7, 9, 11-14, and 16-18, a means plus function limitation is improperly used because they present in a single means claim and every conceivable manner of accomplishing this function is encompassed and the specification does not support this. Thus, the metes and bounds of the claim cannot be properly ascertained. With respect to claim 2, there is no antecedent basis for "said railing".

***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 11-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Fahey et al. (U.S. Patent No. 4,073,382). As broadly as these claims recite, they read on a platform safety gate of Fahey et al. See Figures 1-10. For example, a counterweight member (132) offset from hinge members (134) that operatively locked the gate shut whenever the cage is above ground and unlocked the gate when the cage returned to the ground. See Figures 1 and 3.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-10 and 15-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fahey et al. (U.S. Patent No. 4,073,382) as applied to claims 1-4 and 11-14 above, and further in view of Murphy et al. (U.S. Patent No. 3,918,755). Murphy et al. teach a hinge member having a spring member (54) that maintains the roller (58) in contact with an angled cam (30). See Figures 2-4. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to provide the gate

of Fahey et al. with a hinge member as taught by Murphy et al. in order to have a gate that offer low resistance to close.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. J. S. Case, K. G. Appell, St.-Germain, Perkins, Kobayashi et al., McWilliams, Budd et al., Leet, Ellis, Hahn et al., Cass, Keller et al., Molloy, Barroero, Teague, Jr., and Kleinhenn, are cited to show a gate that has similar configurations of design to applicant's invention.
